Detailed Description

French Abstract

...un procede et un systeme permettant d'elaborer des modeles de taches
d'un site **Web** qui sont progressivement affines et ensuite, d'analyser
le comportement de l'utilisateur final qui est en relation avec ce site
Web . Le modele de taches peut etre elabore sans intervention humaine.
L'utilisation de dictionnaire d...

...les affaires commerciales. Des donnees concernant le comportement de
l'utilisateur final sur le site **Web** peuvent ensuite permettre d'affiner
le modele de taches. L'affinage iteratif du modele de...

...exemple, des calculs indiquant combien tout defaut de conception
specifique coute aux createurs de sites **Web** peuvent etre effectues. De
plus, une conception de site **Web** est evaluee pour voir si elle est bien
adaptee aux objectifs commerciaux specifiques pour le site **Web** . Un
graphique de taches reel, un graphique de taches ideal et un graphique de
taches empirique pour un site **Web** peuvent etre compares. De plus, une
evaluation comparative des sites **Web** connexes peut etre realisee.

Detailed Description

... links that are allowed in the body of the page, if half or more the
total number of allowable **links**
28

for that page are consumed by the **navigation bar** , in one embodiment,
only a global warning about the **number** of the **links** in the
navigation bar will be reported.

7. Too many images outside an HTML table. Again, this causes a...

INTERNATIONAL PATENT CLASS: **G06F-017/30**

...SPECIFICATION logical units (called "anchors" in the present claim) and more particularly an apparatus for automatically **calculating** or setting **anchor** information which has hitherto needed to be carried out for each frame.

(1) The moving...according to an interior division calculation from the amount of change in corresponding information between **anchors** and so this **calculation** can be rendered considerably less troublesome.

(3) In cases (2), in one aspect of this...setting period which are partitioned by the standard frames the anchor estimating portion executes interpolation **calculation** of the **anchor** information between the standard frames positioned at both ends of the section, and estimates the ...

...standard frame is obtainable having the designated permissible deviation value of error from the interpolation **calculation** of the **anchor** information in other standard frames, this standard frame deletion portion demotes the relevant standard frame...

...of the moving image and user specifications. The anchor of the demoted frame is thereafter **calculated** from the **anchor** position information of other standard frames.

In this case, an unnecessary standard frame is deleted...

...anchor information set in the first embodiment.

Fig. 4 is a diagram depicting an interpolation **calculation** method for **anchor** information according to the first embodiment.

Fig. 5 is a diagram depicting a table obtained...new anchor is to be set (S24), and when the desired frame appears, the "start **frame** " **button** on the screen is pressed and the start frame is registered. This is now in...

...them is obtained by interpolation calculation (S28). Fig. 4 is a diagram showing the interpolation **calculation** method of **anchor** information. Here, with

anchor information A (t0) at start frame (time t0)

anchor information A...information storage portion 22.

Next, while determining the anchor information of another frame by interpolation **calculation** based on the **anchor** information of the two outer standard frames and the middle standard frame (S44), the anchor... anchor region for a frame displayed in the image display region, and similarly a start **frame** specification **button** 56 and an end **frame** specification **button** 58 for specifying a displayed frame as a start frame or an end frame. In...

...related box group 62 to display the name, ID, start frame number and end frame **number** of the **anchor** to be set or revised. Below the image display region 50 is a scene-related...

...frame of the anchor which is to be set appears, the user presses the start **frame** specification **button** 56 and registers this frame. Now the double vertical line 72 displaying the position of...region specification. For instance in the UI in Fig. 9 in addition to the start **frame** specification **button** 56 and the end **frame** specification **button** 58 a middle standard **frame** **button** may be provided. Since this frame is used as a standard frame from the outset...

...the characteristics of the moving image to be processed.

Embodiment 2

In the first embodiment **calculation** of **anchor** information was executed automatically by interpolation and revision was executed manually. An apparatus which, based...embodiment, anchor information for frames other than standard frames may be successively determined from interpolation **calculation**.

(2) Automatic **Anchor** Setting based on Utilization of Outline Information

As another method of automatic anchor setting an...

...CLAIMS anchor setting period partitioned by the standard frame, the anchor estimating portion (112) executes interpolation **calculation** of **anchor** information between frames positioned at both ends of the section and estimates the anchor information...

...a particular standard frame is acquired having a designated permissible deviation value from an interpolation **calculation** of **anchor** information in other standard frames, this standard frame deletion portion (115) demotes the relevant standard...

INTERNATIONAL PATENT CLASS: G06F-017/30

...ABSTRACT A method for managing document information on an information net, such as the World Wide Web (WWW), comprises the steps of inputting a structured document; extracting selected document properties from the structured...

...SPECIFICATION the structured document by determining the ratio of the number of text characters within hyperlink **anchors** and a **weighted number** of hyperlinks within images and maps to the total number of rendered text characters.

In...links can be taken into account by counting them as "C characters", both toward the **number** of characters within **anchors** , and toward the **total** number of characters, where the value of C can be determined empirically. Client-side image...

...CLAIMS said structured document by determining the ratio of the number of text characters within hyperlink **anchors** and a **weighted number** of hyperlinks within images and maps to the number of rendered text characters.

8. A...

...text characters in said document
counting the number L of hyperlink characters contained within hyperlink **anchors** in said document;
counting the number I of hyperlinks within images and maps in said document;
calculating said link...

SIMILARITY SEARCH ENGINE FOR USE WITH RELATIONAL DATABASES

Main International Patent Class: **G06F-017/30**

Fulltext Availability:

Detailed Description
Claims

English Abstract

...a system and method for defining a schema and sending a query to a
Similarity **Search Engine** to determine a quantitative assessment of
the similarity of attributes between an anchor record and one or more
target records (Figure 1). The Similarity **Search Engine** makes a
similarity assessment in a single pass through the target records having
multiple relationship characteristics. The Similarity **Search Engine**
is a server (190) configuration that comprises a Gateway for command and
response routing (110...

...for providing data persistence, data retrieval and access to User
Defined Functions (145). The Similarity **Search Engine** uses a unique
command syntax based on the Extensible Markup Language to implement
functions necessary...

Detailed Description

... may also be used modulate the relative importance of different
attribute scores. The measurement functions, **weighting** functions,
aggregation algorithms, **anchor** document, and target documents are
generally specified in a "66schema" document. In Table 1, anchor...
semantics identifying measures for computing token attribute similarity
search scores between search documents and an **anchor** document, **weights**
for modulating token attribute similarity search scores, choices for
aggregating token attribute similarity search scores...

Claim

... semantics identifying measures for computing token attribute
similarity search scores between search documents and an **anchor**
document, **weights** for modulating token attribute similarity search
scores, choices for aggregating token attribute

US 20020129014	A1	16	G06F-017/30	

Abstract (Basic): US 20020129014 A1

NOVELTY - An intrinsic rank which is a function of a content score and a **page weight** of a hypertext **page** is calculated. An extrinsic rank which is a function of a **anchor weight** and the **page weight** of the **pages** providing inbound links to the **page** is calculated. The ranks of the hypertext **page** is calculated by combining intrinsic and extrinsic ranks of the **page**.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) **Web search engine**; and
- (2) Hypertext **pages** ranking computer system.

USE - For ranking the relevancy of a collection of hypertext **web pages** to a keyword based query for use in computer system.

ADVANTAGE - Enables ranking the **pages** without limitation to topic according to the quality of individual **pages**. Enables the **search engine** to present the search results in such a way that the most relevant results appear on the top of the list.

DESCRIPTION OF DRAWING(S) - The figure shows the flow diagram of the **search engine** ranker.

pp; 16 DwgNo 4/6

JP 2002163276	A		11	G06F-017/30	

Abstract (Basic): JP 2002163276 A

NOVELTY - Document **summary** system includes **anchor** character row extraction unit (11) to extract the anchor character row from document for forming a summary by linking. A score provided to the anchor character based on the frequency of appearance of the anchor character row, in the document is stored in a memory. The documents are linked such that score obtained by **sum - total** of the scores of **anchor** character row is maximum.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for document summary method.

USE - E.g. **search engine** for output of search result in internet.

ADVANTAGE - More suitable documents are accessed and output in a short time based on the anchor character row contained in the documents.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the document summary system. (Drawing includes non-English language text).

Anchor character row extraction unit (11)

pp; 11 DwgNo 1/12

PROCESSING -- Computer Applications)
JAPIO KEYWORD: R131 (INFORMATION PROCESSING -- Microcomputers &
Microprocessors)

ABSTRACT

PROBLEM TO BE SOLVED: To shorten processing time by eliminating necessity for an operator to change the attribute of text frame corresponding to an image frame and simplifying operation in the case of editing a document mixing an image and a text by similarly changing the attribute of interlocked text frame as well when the attribute of image frame under editing is changed.

SOLUTION: In automatic text frame high light processing, the attribute of interlocked text frame is found from the address of image frame attribute area and a link table 100 and the high light display of interlocked text frame is performed as well. First of all, a **link count** is found from the image **frame** attribute. The **link count** shows the order on the **link** table 100 where the current image frame attribute is registered. Next, the link table 100 is searched from the **link count**, an ordinary text frame attribute pointer is found, a high light text frame attribute pointer to be shown in 108 is acquired from the configuration of ordinary text frame attribute area 106, and the text frame is turned to high light display as well.

01655333 DOCUMENT TYPE: Product

PRODUCT NAME: Adobe GoLive 6.0 (655333)

Adobe Systems Inc (394173)
345 Park Ave
San Jose, CA 95110-2704 United States
TELEPHONE: (408) 536-6000

RECORD TYPE: Directory

CONTACT: Sales Department

Adobe GoLive 6.0 provides all the tools needed to create fully dynamic Web sites. It provides advanced WYSIWYG Cascading Style Sheets (CSS) and easy-to-use Dynamic Hypertext Markup Language (DHTML) suitable for professional designers seeking an industrial-strength solution for dynamic Web site design. All features need to design, lay out, and manage a Web site are provided. Users can visually lay out Web pages with full graphical control, in comparison to other graphical Web authoring products that operate much like a word processor. GoLive always works in an HTML native file format, and generates accurate HTML source code that is easily viewed and edited at any time in GoLive's full-functioned source code editor. Key features include visual layout and design control; advanced site management; HTML native file format; HTML source code and JavaScript editing; and user-defined options. Users can easily create Web pages with **frames**, and users can preview and edit **frame** sets without jumping to and from a browser. The site's structure can be graphically viewed, so that users can adjust a site's hierarchy, add pages, delete pages, and open individual pages. They also can visually verify, change, and update links and **anchors**, or spell check one page or a complete site. The link view provides a schematic view of Web pages that shows all links, and allows users to navigate through the entire link structure of a site. Components include the Pay Layout Mode; Project Manager; Color Picker; Palettes; the Inspector; Floating Box Controller; Timeline Editor; Cascading Style Sheets; Master Components; Ready-to-Use JavaScript Actions; and Professional Source Code Control. Adobe GoLive is the first Web authoring tool that allows the user to visually control and editing Cascading Style Sheets in WYSIWYG mode. New features include Collaboration tools, wireless authoring and site diagrams.

DESCRIPTORS: Authoring Systems; Electronic Publishing; Program Development
; Web Site Design; Webmasters; WYSIWYG

HARDWARE: Apple Macintosh; IBM PC & Compatibles; Pentium; PowerMac

OPERATING SYSTEM: MacOS; MacOS X; Windows; Windows NT/2000

PROGRAM LANGUAGES: ActiveX; HTML; JavaScript; WML

TYPE OF PRODUCT: Micro

POTENTIAL USERS: Cross Industry, Web Designers, Webmasters

PRICE: \$299; upgrade--\$99; Internet demo available; download prices lower

DOCUMENTATION AVAILABLE: User manuals

TRAINING AVAILABLE: Technical support; Internet support; e-mail support

OTHER REQUIREMENTS: 96MB RAM; 400MHz+ Pentium+ or PowerMac+ CPU required

SERVICES AVAILABLE: User groups; newsletters

Anchor's a way for Web docs: AnchorPage 1.0

Powell, James E

Windows Magazine , December 1, 1995 , v6 n14 p210, 1 Page(s)

ISSN: 1060-1066

Company Name: Iconovex

Product Name: AnchorPage

Languages: English

Document Type: Software Review

Grade (of Product Reviewed): B

Hardware/Software Compatibility: IBM PC Compatible; Microsoft Windows

Geographic Location: United States

Presents a favorable review of AnchorPage v1.0 (\$895), an indexing program from Iconovex Corp. (800, 612). Runs on IBM PC compatibles with 8MB RAM, 10MB hard disk space, and Windows. Explains that AnchorPage enhances ordinary HTML documents by building keyword and subject indexes. Specifies that this program parses selected documents into four views: Table of Contents that extracts headings; Abstract View summarizes the document's ideas; Concept View presents topics alphabetically giving a short explanation of the abstract subjects; and Phrase View alphabetizes Concept View's phrases. Notes that all entries in the views have hyperlinks added to your document's text, and you can create circular links. Indicates that your files and settings are saved in a project file, and **AnchorPage's parsing** engine is reasonably fast, requiring about six minutes for a 14-document test. (jo)

ABSTRACT: This paper describes a searching and ranking scheme using hyperlinks and their associated anchor texts in order to improve a **search engine's** ranking quality. The results of our experiments with this scheme show an improvement of ranking quality for a **search engine** called "ODIN". (author abst.)

Abstract: Two popular link-based webpage ranking algorithms are (i) PageRank left bracket 1 right bracket and (ii) HITS (Hypertext Induced Topic Selection) left bracket 3 right bracket. HITS makes the crucial distinction of hubs and authorities and computes them in a mutually reinforcing way. PageRank considers the hyperlink weight normalization and the equilibrium distribution of random surfers as the citation score. We generalize and combine these key concepts into a unified framework, in which we prove that rankings produced by PageRank and HITS are both highly correlated with the ranking by in-degree and out-degree. 3 Refs.

Abstract: External Broken **links** have a negative impact on any, **web page** user. However, little or-no information is provided in advance to advise the user of the quality of the available **links** before they hit them. Our contributions in this paper are: (1) To present our arguments to suggest that the external **link** quality is not binary (broken or available) but instead it is a continuous value from low reliability to high reliability (2) To emphasise the need for the **web** designers to provide some information in advance to the user suggesting the quality of the **link** . This approach is very similar to having the image size next to a potential loading image giving the user a broad idea about the resources needed to download that image. (3) To present a new tool called WLGauge that can measure some quality attributes of the external **links** in a **web page** . WLGauge is an open framelet that can be easily plugged on to any **web site** development toolbox. WLGauge has been designed with an intention to help the **web** designer and **web** maintenance teams to understand as well as improve the quality of their **web pages** .

Descriptors--Author Keywords: **website** ; open **framelets** ; external **link** quality ; **website** quality and automatic testing

The anatomy of a large-scale hypertextual Web search engine.

Brin, Sergey; Page, Lawrence

Computer Networks and ISDN Systems, v30, n1-7, p107(11)

April, 1998

ISSN: 0169-7552 LANGUAGE: English RECORD TYPE: Abstract

ABSTRACT: Evaluation of a hypertext-based, scalable **search engine**
prototype called Google reveals that the **search engine** is effective in
providing high-quality search results over a rapidly growing Internet. The
search engine makes use of **page rank**, **anchor** text and proximity
information to improve search quality and is also a complete architecture
that gathers, indexes and performs search queries over **web pages**.
